

Vibiemme
Sistemi per caffè espresso

Minimax

The Minimax is a compact machine offering a superior espresso solution for the smaller commercial environment or mobile coffee cart.

Vibiemme designed the Minimax for those environments who produce moderate volumes of coffee per day, but still benefiting from the same components and same exacting standards as the larger models in the Vibiemme range.

The Minimax, as standard, has a volumetric coffee control with semi-automatic over-ride, a thermo-syphon brewing system combined with reversed mounted heat exchange units and VBM patented E64 group heads. The standard horizontal static pre-infusion chamber is optioned with electronic pre-infusion aiding for precise control of extraction.

ECA Espresso Company Australia Pty Ltd

Technical Specifications

- Volumetric dosing with 4 dose touch pad with over-riding button
- Adjustable feet positions for easy movement in confined spaces
- E64 group head with horizontal static pre-infusion chamber
- Manual lever for boiler fill
- Standard in gloss black
- Ideal for mobile carts
